RAM-Bar™ Changing Station

The RAM-Bar™ Changing Station makes removing and replacing a RAM-Bar™ during target changes both safe and easy.

The changing station has two stands: one stand cradles the target, and the other stand holds the RAM-Bar™ as it is removed or inserted.

Each stand has a winch and strap to make pulling the RAM-Bar™ easy. The RAM-Bar™ side has UHMW plastic rails for easy sliding.

A hook, which is stored in the target stand, is included to guide the strap through the target during insertion.

The stands can be easily disassembled for storage.
